Raise a RuntimeError

Raise a RuntimeError

- In Python, you can force a particular type of exception if a condition occurs

- To throw (or raise) an exception, use the *raise* keyword

- For example:

```
def divide(a, b):
    '''Divides a by b.
    Raises a RuntimeError if given b is less than or equal to 0.'''

    if b <= 0:
        #This will show the error and exit the program
        raise RuntimeError('b is less than or equal to 0')

    return a / b
```
